Guide to E-magazine

Content Sections

- CENS.com**
Access to CENS.com for more information, industry news & reports.
- Online Product Index**
Find quickly product categories of interest.
- Advertiser Index**
Find easily suppliers of interest.
- Articles**
Find here industry news, reports, and editorial articles.

For details on suppliers & products

Simply use hyperlink icons:

- Inquire Now**

Click **Inquire Now** to safely, quickly connect to online inquiry form for the advertiser/supplier.
- Webpage**

Click **Webpage** to connect to the introduction of the advertiser/supplier.

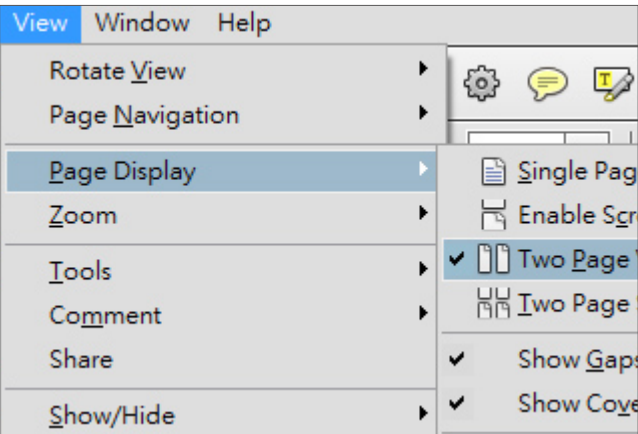

Some suppliers may have stopped advertising on CENS.com, but information in this E-magazine remains accurate as of its publish date.

Guide to PDF Reader

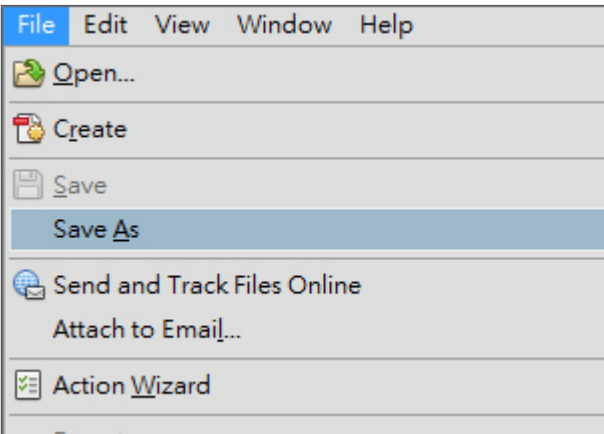

How to edit display settings

Select “View >> Page Display” to edit the way you like to read E-magazine.

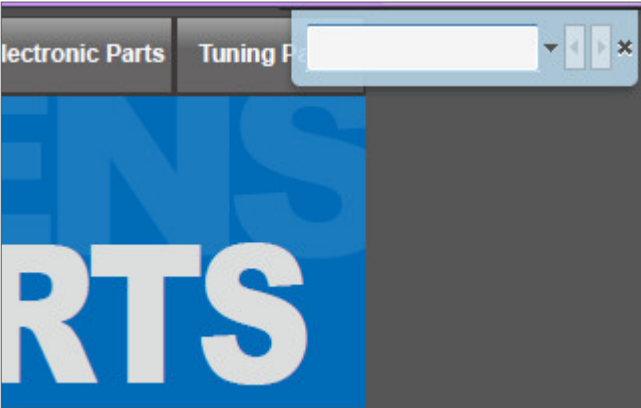

How to save a new copy of this E-magazine

Press “Shift + Ctrl + S” or select the “Save” option, and confirm your selection by choosing “Save a copy”.

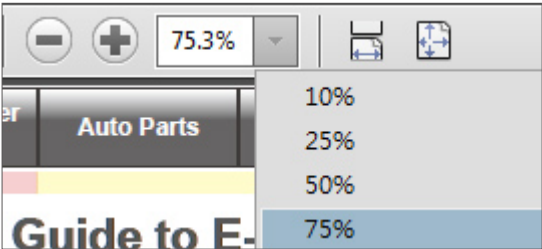

How to text search

Press “Ctrl + F” and enter keyword(s). If no match is found, broaden the category of keyword(s). This search function works on exact match of keyword(s).

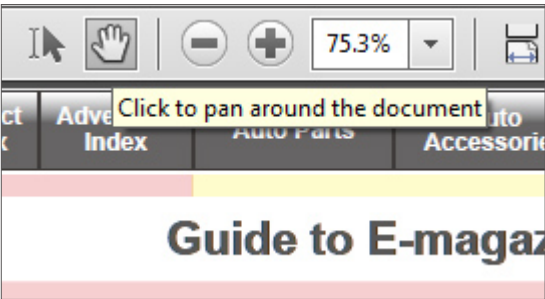

How to use zoom options and move around an enlarged page

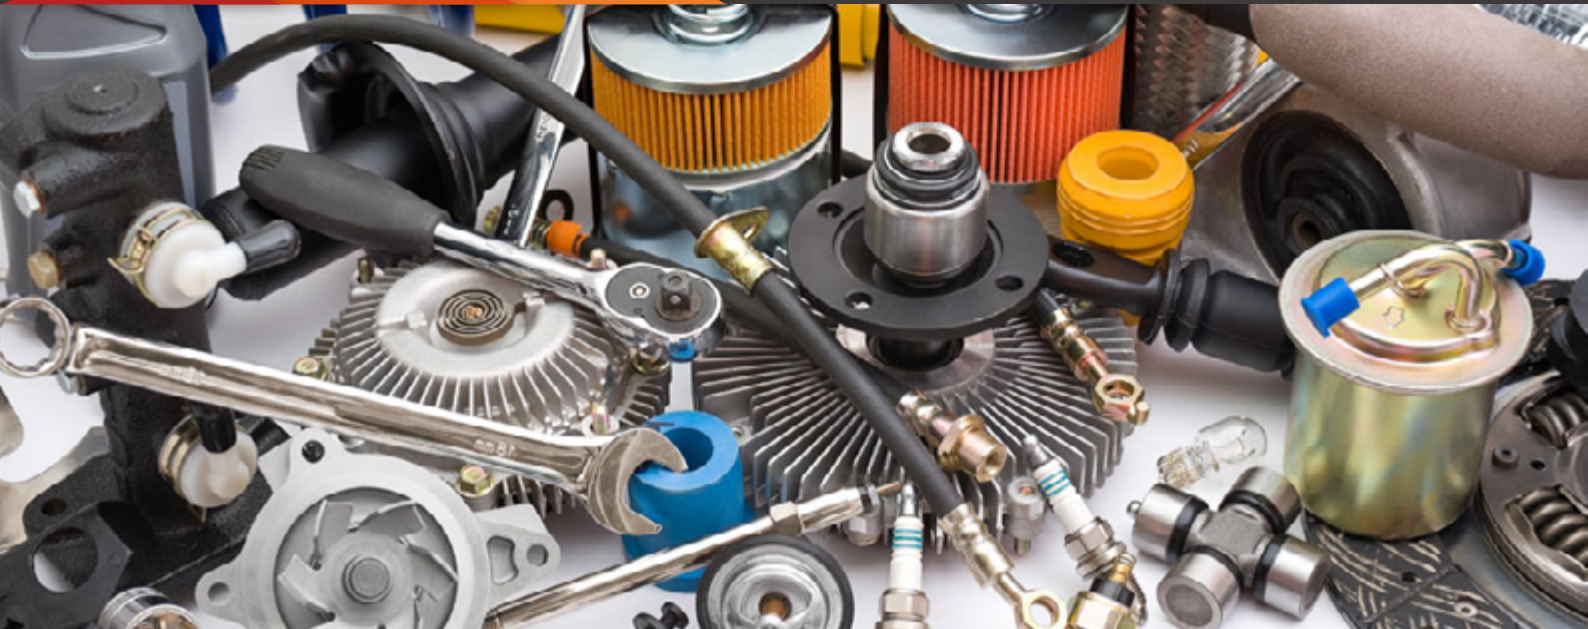

Click either   icon to zoom in or out a page.

“Hand Tool” enables moving around an enlarged page for reading convenience.

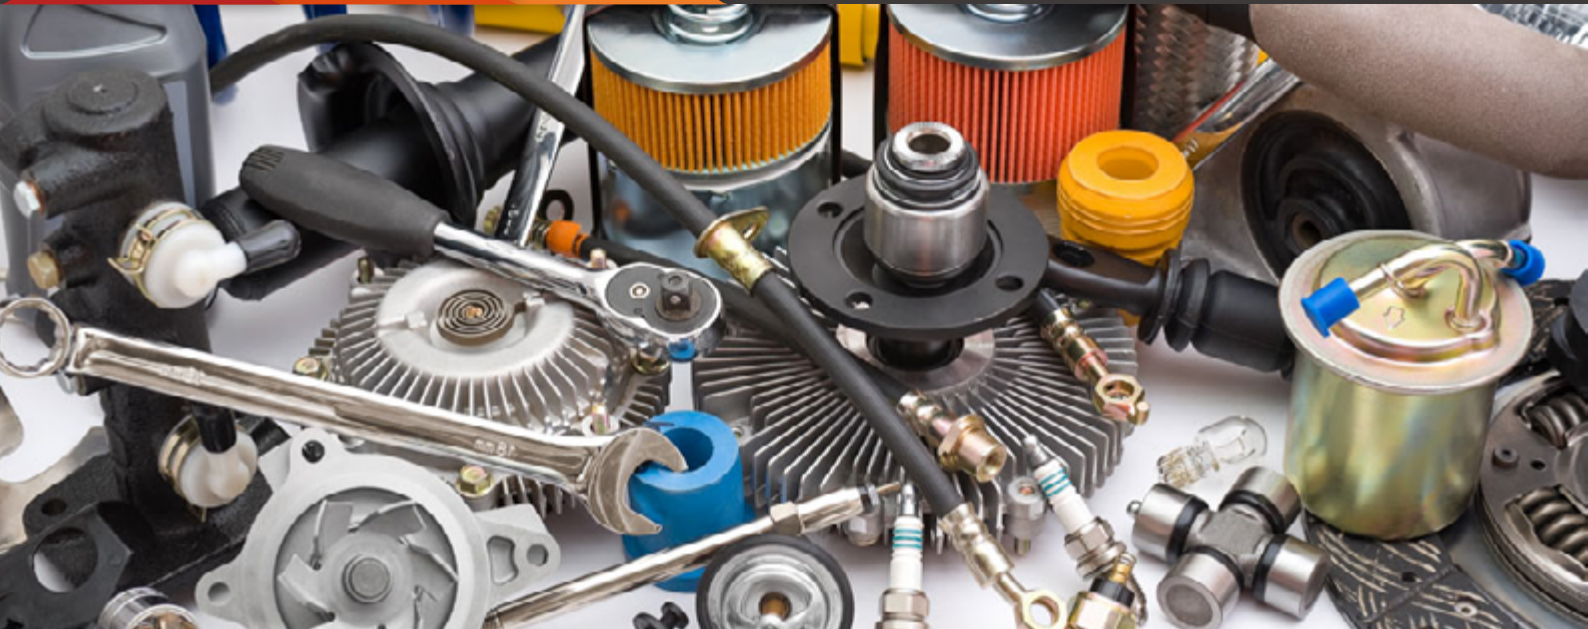

* The above guidelines are based on Adobe Reader. When using other PDF reading software, check “Help” function to edit page display settings. If reading this PDF E-magazine via Chrome, Firefox or IE, enable Adobe Plug-in to improve viewing experience.
Please feel free to comment regarding using this E-magazine by emailing: buyerservice@cens.com

TARC Showcases Latest Automotive & EV R&D Achievements in 2015 EV Taiwan

Enhancing driver safety is among focuses of these new technologies

by QUINCY LIANG

The Taiwan Automotive Research Consortium (TARC), a key automotive industry alliance formed by domestic research institutes and private makers, presented its latest R&D achievements to global visitors at this year's 5-in-1 auto and motorcycle shows in Taiwan, comprising the 2015 Taiwan Int'l Electric Vehicle Show (EV Taiwan), Taiwan International Motorcycle Industry Show (Motorcycle Taiwan), Taipei International Auto Parts & Accessories Show (Taipei AMPA), Taipei International Automobile Electronics Show (AutoTronics Taipei), and Taiwan International Tuning & Car Care Show (Tuning & Car Care Taiwan). In addition to exhibiting the island's R&D strength in the automotive fields, the show showcased many advanced, innovative and globally competitive products.

The Department of Industrial Technology (DoIT) of the Ministry of Economic Affairs

(MOEA) urged four research institutes to establish the TARC in mid-2005. The six members of the consortium are the Automotive Research and Testing Center (ARTC), Mechanical and System Research Laboratories (MSL) of Industrial Technology Research Institute (ITRI), Material and Chemical Research Laboratories (MCL) of ITRI, the Chung-Shan Institute of Science and Technology (CSIST), and Hua-chuang Automobile Information Technical Center Co. Ltd. (HAITEC).

The TARC aims to establish an integrated platform for automotive technological R&D; help the domestic industry to set up concurrent engineering design platform through international cooperation and technology transfer; and work with local universities to train personnel to set up a platform for innovative research. In recent

years, the TARC has been integrating major industrial research institutes and technologies to develop EVs and key systems, as well as advanced automotive-electronic systems.

The TARC Pavilion at the 2015 EV Taiwan unveiled R&D projects and achievements that have numerous practical merits and are ready for technical transfers to the private sector.

Electric Power Steering System (EPS) Series

Among the abundant R&D achievements displayed this year, the electric power steering system (EPS) series attracted intensive attention. The series is jointly developed by several parties.

TARC demonstrated homegrown EPS systems developed collaboratively by different parties.

ARTC is responsible for the column type EPS, an EPS integrating the electric motor with the steering mechanism. The electronic control unit (ECU) uses the steering torque signal and vehicle speed to control the motor and produce the corresponding steering assistance. The EPS helps the driver steer the vehicle and provides variable steering feel according to the speed. Hiwin Technologies Corp.'s rack-type EPS provides assist force to the rack by the ball screw and nut, with a rack force greater than 11kN. Rotatech International Corp.'s all terrain vehicle (ATV) EPS integrates the key components (torque sensor, ECU, and motor) in one module. It can be easily applied to an ATV/UTV steering mechanism. China Motor Corp., the local assembler of Mitsubishi cars and maker of own-brand e-moving electric scooters, demonstrated its EPS ECU,

which has return and damp control strategies to support convenient, safe and comfortable driving. The EPS ECU is also the first home-grown component of its type to be installed on passenger cars.

EV Motor Controller

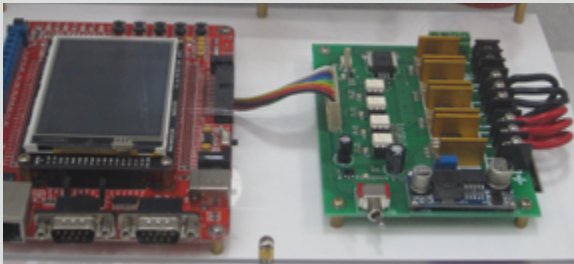

ITRI showcased a 50kW EV motor controller, the first such device developed and made in Taiwan.

ITRI showcased a 50kW electric vehicle (EV) EV motor controller, the first such one developed and made in Taiwan. ITRI says that the technology can be transferred to a domestic controller company for production of electric propulsion control systems. Controller companies need to develop their own EV propulsion modules to become key suppliers in the global EV supply chain.

Module features:

1. World-class high-efficiency EV motor controllers in line with DOE standards; high power density, high efficiency, and a wide-range of applications.
2. Safety-protection and diagnostic technology for the EV propulsion module.
3. Standard and regulation verification (IEC 60785 / IEC 60786 / ISO 16750 / EMC 56-1).
4. The controller has a built-in three-in-onesilicon carbide (SiC) high power module with advanced functions and technologies such as: micro-channel direct cooling technology and low-stress structure to increase thermal performance and reliability; heavy wire-bonding increases current density; copper metal bonding of terminal to increase reliability; and vacuum reflow to decrease bonding void rate.

Portable Battery Diagnostic Device

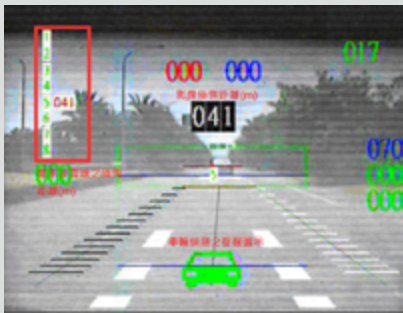

The Portable Battery Diagnostic Device connects the battery management system (BMS) can be used on lithium-ion battery packs to diagnose the SOH of all cells in the pack.

This device is used to connect the battery management system (BMS) of a lithium-ion battery pack. The device uses a two-pulse load testing type diagnostic method that can perform diagnostics in three minutes to establish the SOC (state of charge) and SOH (state of health) during charging. The proposed technique not only provides a diagnostic device, but can also be used as an on-board system in EVs. The proposed technique can also be adopted in power cells, modules and packs.

Sensor Fusion System

ARTC introduced its sensor fusion system featuring greater resistance to sensing failure due to environmental causes; no lane-detection; and high CPU computation efficiency. Testing results also demonstrate the robustness of the sensor fusion system.

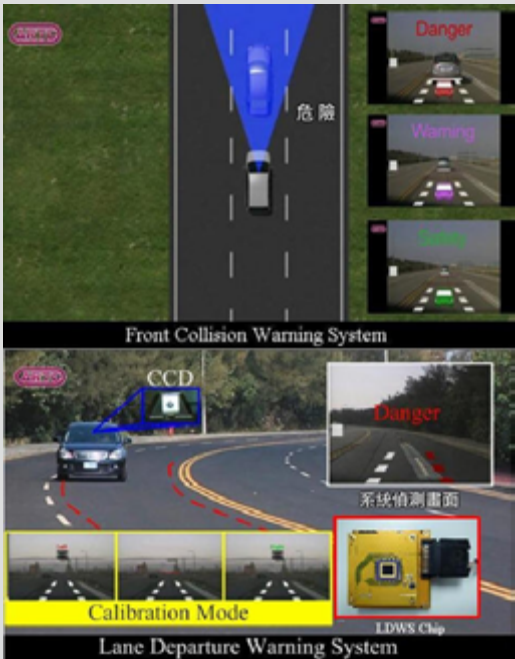

ARTC introduced its sensor fusion system, which is less prone to failure due to environmental causes. It also has no lane-detection and high CPU computation efficiency.

ARTC says that most car-detection mechanisms developed in Autonomous Emergency Braking (AEB) systems use a single sensor. This has limited the operating conditions of the AEB system due to the physical weakness of the sensor. The disadvantages of radars and image-sensing, however, are compensated in a sensor fusion manner, which stabilizes the vehicle sensing system and thus enables safe operation at all times and in all kinds of environmental conditions. The system can detect vehicle speeds between 10kph and 50kph; has a detection range 5-50 meters; has a barrier definition plus or minus 10 degrees for front vehicles; and has a detection accuracy of up to 95%.

Forward Safety Warning System on Chip

This chip system combines both Lane Departure Warning System (LDWS) and Front Collision Warning System (FCWS) functions to simultaneously detect lane markers and front vehicles. It also issues early warning signals when there is the danger of unintentional departure or possible rear-end collision with the front cars by using a CCD/ CMS camera mounted on the vehicle.

A chip combining both LDWS and FCWS functions was developed to simultaneously detect lane markers and front vehicles.

Compared to most products available on the market, the chip is a low-cost and high-reliability solution. Other specifications of the chip include a maximum vehicle detection range up to 50 meters; and ability to detect most types of lane markers and vehicles; ability to detect lane widths between 3 and 4 meters. The system can also process vehicle speeds ranging from 45 to 120 kph, a curve radius of about 250m, and image processing speed of about 25 frame/s. A Taiwanese chipmaker is scheduled to commercialize the chip technology as an integrated DVR system-on-a-chip (SOC) chip in mid-2015.

Clad Metal Electromagnetic Shielding Technology

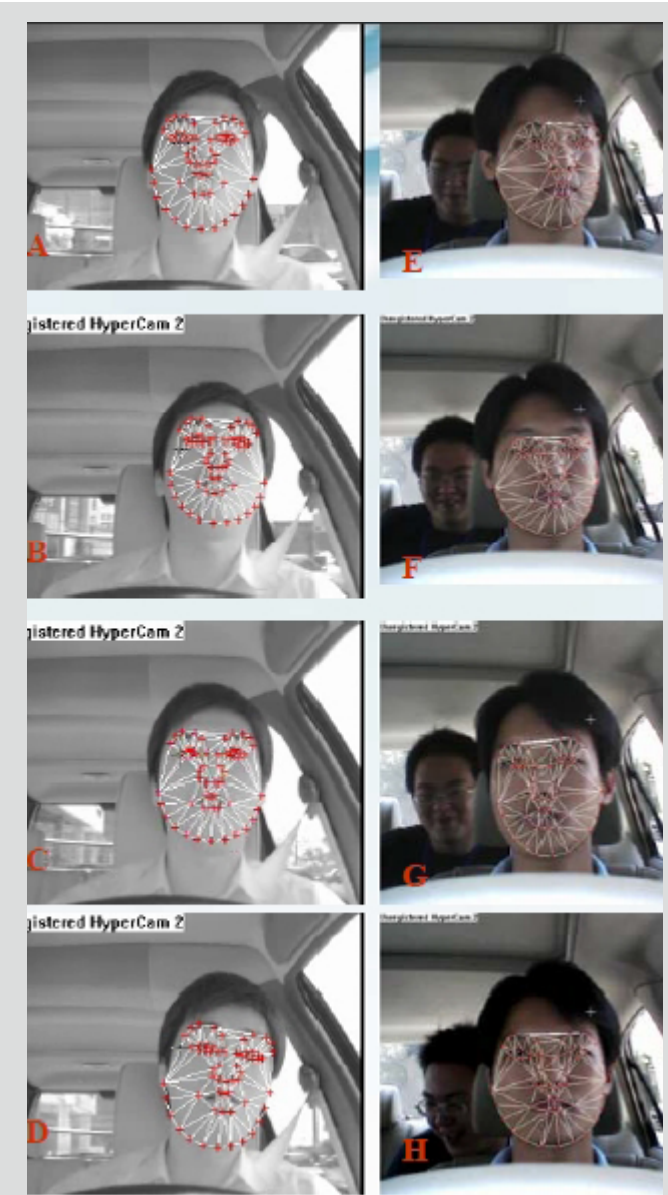

TARC developed the high electromagnetic shielding clad metal technology to reduce electromagnetic waves, meeting the VSCC561 standard for vehicular electronic equipment. By adopting the aluminum/copper clad metal to replace aluminum counterparts, the clad metal technology can help reduce weight by 17%, while upgrading the electromagnetic shielding properties (400M-1000 MHz) by about 20%.

Vehicular equipment housing made with the high electromagnetic shielding clad metal technology.

The advanced technology has helped local automotive-electronic maker Whetron Electronics Co., Ltd. overcoming traditional technology bottlenecks and pass the integrated battery-module testing.

Driver Physiology Recognition & Monitoring System

The Driver Physiology Recognition & Monitoring System provides driver monitoring functions with multiple sensors, including an ECG sensor and camera-based systems.

The Driver Physiology Recognition & Monitoring System developed by ARTC provides driver monitoring functions with multi-sensors, including electrocardiogram (ECG) sensor and camera-based systems. This system utilizes ECG signals and present self-developed algorithm to distinguish driver normal/abnormal conditions. The ECG sensor also integrates with the steering wheel, identifying the driver identity by using individual differences of the waves in

ECG patterns. In addition, the system also analyzes head swing with image processing technology to decide whether the driver is concentrating on driving or not. For driving safety, the fusion of multiple parameters not only yields ID and physical recognition, but also prevents distracted driving.

Driver's 3D Gesture Control

This technology enables drivers to control different electrical equipment and instruments with gestures using depth sensors. For example, the driver can switch on or off the wipers, infotainment system, and headlamps with the wave of a palm or arm. The technology can reduce the risks associated with driver distraction.

The system has 3D gesture recognition learning capability, thanks to its Virtual Reality technology, improving the recognition rate. Nice functions: when you wave your hand around, the wiper system will switch on. Tilt your arm and the music will play.

3D AVM

The 3D Around View Monitor (AVM) system can perform real-time aspheric perspective transforming, stereo image stitching, and vision conversion. It features no visual blind spots, helps drivers avoid accidents, has a simple and clear display, and enables drivers to relax while driving.

Vehicle Parking Collision Avoidance System

The vehicle parking collision avoidance system combines vehicle sensors, such as ultrasonic parking sensors, and speed sensors with integrated electric parking brake (IEPB) technology to execute brake assist in park. Compared to general and typical emergency braking safety structure applying hydraulic brake and millimeter wave radar, the cost of this system is lower, while the parking safe function is still provided during low-speed situations.

The vehicle parking collision avoidance system combines vehicle sensors, speed sensors and integrated electric parking brake (IEPB) technology to execute braking and assist with parking.

Key technologies used in this system include rear-end obstacle detection, IEPB brake control design, parking collision-avoidance algorithm, vehicle tracking prediction, and system motor fault identification and analysis technology.

Autonomous Emergency Braking (AEB)

Another advanced technology showcased was the Autonomous Emergency Braking (AEB): a common active-safety system on luxury cars. ARTC says that the key to such systems is more enhanced identification of barriers.

A real-vehicle demonstration of the Autonomous Emergency Braking (AEB) developed by ARTC.

AEB employs sensors to monitor the proximity of vehicles in front and detects

situations where the relative speed and distance between the host and target vehicles suggest that a collision is imminent. In such situations, emergency braking is automatically applied to avoid a collision or at least mitigate its effects.

In its development efforts, ARTC integrated both millimeter-wave radar and image-sensing technology into the core architecture of its AEB system. With their recognition and distance-detection capability, image-sensing systems are easily affected by weather conditions and background complexity. Millimeter-wave radar, which is currently the mainstream collision-prevention technology, addresses this problem by transmitting radio waves to the vehicle ahead and analyzes the arrival time and direction of the reflected waves to measure the distance to the vehicle and determine its speed and position. The resulting information is relayed to Pre-Crash Safety (PCS) systems, which attempt to minimize crash damage when detecting an imminent collision, and Adaptive Cruise Control (ACC) systems, which maintain a safe distance between vehicles.

Millimeter-wave radar is not vulnerable to weather conditions, but it cannot recognize the character of the objects it detects. So, ARTC claims, the integration of millimeter-wave radar and image-sensing technologies into a single AEB system creates many advantages: pedestrian recognition, background-complexity reduction, lowering of the algorithm volume of central processors, etc. For AEB system development, the center integrates digital image processors and micro controllers into one dual-core processor module as the algorithm core for real-time lane recognition, front-vehicle distance detection, multi-sensing fusion, and route prediction.

MIRDC EV-No.4 EREV Chassis Platform

The MIRDC EV-No.4 EV open chassis platform features a Space Frame structure design and high-strength steel, making it

both lightweight, structurally strong and compact. With key components developed and made by local companies, the platform is expected to help local EREV and EV parts makers to more smoothly tap into the international market.

The MIRDC No. 4 open chassis platform features Space Frame structure design and high-strength steel.

Main features of the open chassis platform:

1. Space Frame utilized the main structure of the underbody to reduce mold costs by more than 30%.
2. The device uses a slip joint and slip plane design technique to fine-tune chassis structure, improve ease use across model types, and reduce assembly tolerance.
3. The Space Frame structure is suitable for small-volume production EVs with different specifications.

Other

TARC also demonstrated a home-use energy storage system, intelligent portable power source made of recycled lithium-ion battery packs, electricity storage demonstration for small communities, a wireless charging system with magnetic field shaping, and the Taiwan EV Supply Chain and EV Monitoring & Service Platform, which is an online platform established by the Department of Industrial Technology (DoIT) and TARC to promote Taiwan's EV supply chain to enhance EV industrial cooperation and development.

Innovation Awards Highlight 2015 Taipei AMPA, AutoTronics Taipei 5-in-1 Mega Show

Award-winning products to be showcased in other
vehicle-related trade fairs worldwide

by QUINCY LIANG

The Taiwan External Trade Development Council (TAITRA) debuted the "Innovation Awards" as part of its 2015 five-in-one mega show comprising the Taipei International Auto Parts & Accessories Show (Taipei AMPA), Taipei International Automobile Electronics Show (AutoTronics Taipei), Taiwan International Motorcycle Industry Show (MOTORCYCLE TAIWAN), EV TAIWAN (Taiwan Int'l Electric Vehicle Show), and Taiwan International Tuning & Car Care Show (TUNING & CAR CARE TAIWAN). Building on the existing Taipei AMPA Innovation Awards and AutoTronics Taipei Innovation Awards, the new award aims to incentivize innovation in Taiwan.

This year, according to TAITRA, a total of 132 products were entered for the 2015 Innovation Awards, along with many international patents they hold, reflecting the growing attention to innovation among local transportation vehicle and parts makers.

The Innovation Award winners were exhibited at the 5-in-1 Mega Show (April 8th to 11th) at TAITRA's feature Light Gallery (Area L Lobby) on 4th floor of the TWTC Nangang Exhibition Hall. The awarded products will continue to be showcased online and in some major international vehicle-related exhibitions such as Automechanika Shanghai, EICMA (in Italy).

The jury based its decisions on four criteria: Innovation (40% of the score), Energy Efficiency (20%), Safety (20%), and Marketability (20%). Products cited by major international design awards as the iF Product Design Award and Red Dot Design Award of Germany, G-Mark of Japan or Industrial Design Excellence Award (IDEA) of the United States also had an advantage in the scoring.

This year's award-winning products, covering the categories of Parts; Accessories, Electronic Parts; Electronic End Products; and Related Products, are introduced below:

Award: Gold Award

Category: Parts

Winning Item: Cat's Pupil--Totally Effective Light Collection Micro Lens

Company: BEAMPRO Technology Co., Ltd.

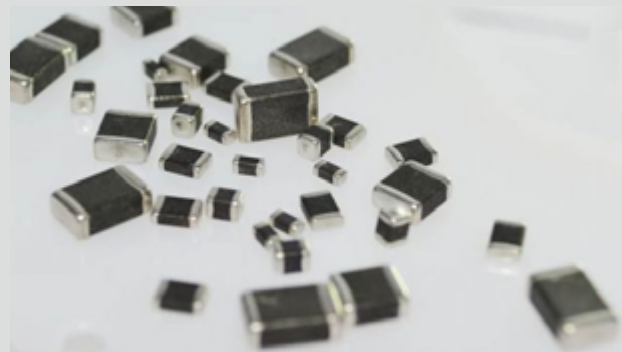

The Cat's Pupil- Totally Effective Light Collection Micro Lens can collect and regularize the irregular light emitted from LED sources so it passes better through the multi-curvature lens controlling the lights. The lights can therefore be used in various car lamp products. Moreover, the ability to collect nearly all the light emitted from the LED chip greatly boosts lighting performance and saves power. Car head lamps with the micro lens can achieve brightness comparable to a 30W source with only 10W. Furthermore, the lens can directly control the cutoff line without shading.

Award: Silver Award

Category: Parts

Winning Item: Automotive Over-voltage Protection Device

Company: SFI Electronics Technology Inc.

Automotive over-voltage protection often involves the following requirements:

(1) Load dump protection for the power supply: Almost all electronic components and circuits connected to a battery need protection solutions to clamp transient voltage (up to 60V) and reverse voltage. The main power input must withstand the transient voltage, including the load dump of power generators. The main standard is ISO7637-2 Pulse 5a/5b.

(2) Automotive electronic devices need to withstand at least $\pm 25\text{kV}$ ESD:

The reliability of automotive electronic devices becomes more and more vital with the increasing applications of electronic technologies in vehicles, such as automotive mobile phone, infotainment, GPS, data recorder, radar, and computers. Humans can also hold a lot of static electricity under various climate and environmental conditions. As electronic component assemblies become more dense, they are more likely to be affected by static discharge. Therefore, international rules require such devices to have a tolerance of $\pm 25\text{kV}$ ESD (ISO10605 standard), and even as high as $\pm 30\text{kV}$.

SFI claims that it can supply components for automotive load dump protection (SHA and SEA series) in a full range of sizes and specifications that comply with the AECQ 200 and the strictest testing standard. The company's automotive load dump protection is the most compact package on the market, the company claims.

Award: Silver Award
Category: Parts
Winning Item: 4-in-1 LED Automotive Lamp
Company: Just Auto Lighting Technology Co., Ltd.

Power-saving integrated LED lamps provide a solution to the problem of space shortage for lighting on electric vehicles (EV).

Just Auto has developed a line of modularized 2-in1 or 3-in-1 LED taillight products, joining brake light / rear position lamp / rear indicator / rear fog light; and front fog light / daytime running light / front. The firm has also used its technical capability and know-how to develop a 4-in-1 lamp (front fog light / daytime running light / front position light / indicator).

The 4-in-1 lamp has a diameter of 9cm and 10.4cm depth. It uses three kinds of LED lights and three types of optical design, with a combined thermal design and shared MCU control circuit to achieve four functions in a single lamp. All four functions comply with UNECE Vehicle Regulation R19, R87, R6, R7 & R10. All materials used meet ROHS, REACH and other environmental directives. In addition to reducing installation space, the lamp can also reduce cable and installation cost.

Award: Bronze Award
Category: Auto Parts
Winning Item: Chameleon Auto Lamp
Company: JW Optical

The patented Chameleon Auto Lamp is a fog lamp that changes light color temperatures without changing the bulb to improve driving vision. The lamp's maker JW Optical says that when driving at night, the 6000K or higher temperature can help drivers to focus. In rain, fog, snow and other poor weather conditions, about 3000K enables excellent penetration for safe driving. JW Optical says that drivers can change the light color temperatures to optimize visibility to specific environments, as well as make their vehicle more visible to other vehicles.

Other product highlights: The Chameleon Auto Lamp is SAE certified; changes color temperatures in less than one second; maintains brightness across color temperatures; and is entirely made in Taiwan.

Award: Bronze Award

Category: Parts

Winning Item: Transformer Full LED Motorcycle Head Lamp

Company: TYC Brothers Industrial Co., Ltd.

Enhancing the overall performance of Ducati New Diavel top-end motorcycle, with self-developed and patented module to streamline and reduce the number of LEDs used for lesser power consumption than the conventional lights, the Transformer Full LED Motorcycle Head Lamp reduces energy consumption by nearly 76%.

The lamp also features an innovative design integrating high and low beams plus position functions, providing bike riders with high quality, absolute comfort and safe riding at all times. In addition, the uniquely shaped space design has both style and functional value, providing a heat sink effect. The Full LED lamp is produced with recyclable and light-weight components that are environmental-friendly and energy-saving. The advanced technology not only lowers power consumption, but also reduces cost with a more streamlined design. Through TYC's continuous innovation and various technology optimizations, the top-end motorcycle headlamp has raised the firm's brand image to a new level.

TYC is a leading auto-lamp maker and exporter in Taiwan, as well as a long-time major player in both the international original equipment (OE) and aftermarket (AM) auto-lamp markets.

Award: Bronze Award

Category: Parts

Winning Item: Auto Air Conditioning Compressor

Company: Procar International Co., Ltd.

The compressor is a key part of the automotive air-conditioning systems. However, the core technology of such key parts has been controlled mainly by big companies in the United States, Japan and Europe. Most Taiwanese compressor makers therefore focus on the rebuild and aftermarket replacement segments.

After years of research, development and testing, Procar made a breakthrough in developing key compressor technology and overcoming patent barriers, developing a brand-new, Taiwan-made automotive air-conditioning system compressor with an innovative and patented inside-piston design. When used in automotive air conditioning systems, the compressor outperforms counterparts made by international major vendors, while its manufacturing costs are much lower. In addition, Procar says, the compressor also features a high local content rate so the company does not need to rely on imported key parts and components. As a result, the compressor's performance and cost competitiveness is much higher than general counterparts.

Accessories

Award: Silver Award (lack of Gold Award)

Category: Accessories

Winning Item: **Internal Bluetooth TPMS (Tire Pressure Monitoring System)**

Company: Sysgration Ltd.

Sysgration launched the "Low Energy Bluetooth TPMS (Tire Pressure Monitoring System) which was designed to work with the majority of car makes and models and transmit real-time data via driver's smartphone. The TPMS can be installed on passenger cars, SUVs, RVs, trucks and buses as a warning system that alerts the driver when the tire is significantly over/under pressure.

The system has a direct tire sensors in a 2.4GHz Bluetooth dongle that sends tire pressure and temperature diagnostic information every 60 seconds to the driver's smartphone TPMS APP. A voice warning system can notify drivers when tire pressure and temperature are too high or low. Installation is easy and quick, with function adjustments written into the APP so that Bluetooth TPMS can be programmed either before or after the wheels are mounted on the vehicle. The CE, FCC, NCC certified system is patented in Taiwan and China.

Award: Bronze Award

Category: Accessories

Winning Item: **GPS Lap Timer Color**

Company: Qstarz International Co., Ltd.

The LT-Q6000 is an automatic Lap Timer based on GPS technology; and a user-friendly device can largely improve a driver's racing capability. The innovative and high-tech device is made in Taiwan. Qstarz developed the MIT Racing analysis system for the Taiwan car racing market. The LT-Q6000 can record lap times, speed, position and acceleration etc. data. It has a 10Hz GPS lap timer to log racing performance every 0.1 second and display accurate measurements and compare racing performance in real-time.

The patented LT-Q6000 has a multicolor display. Green means faster, and red means slower, making it easy to track lap or split progress and make instant decisions when driving. The Predictive Lap Times function can help drivers either shoot for a faster lap or plan a future lap. The Auto-Start function can activate without button activation. The transponder needs to be pre-installed and configured. However, the LT-Q6000 is much easier as a stand-alone and plug and play device. Users can follow the on-screen tips to operate. The timer is suitable for many different racing types, including drag races, circuit races, rally races and performance tests, helping drivers to tune their cars and hone driving skills.

Award: Bronze Award

Category: Accessories

Winning Item: **BLUE EYES "I-Key" motorcycle security system**

Company: What-Trend Technology Co., Ltd.

The BLUE EYES "I-Key" motorcycle security system brings the automobile "I-Key" (or Smart Key) system concept to the motorcycle market. The security system is easy, convenience and safe.

Product characteristics:

'The world's smallest control module, BLUE EYES combines a bidirectional radio frequency identification (RFID) system, TX LF antenna, and UHF RX antenna all in one unit.

'One key start function

'Easy installation: Plug out and in.

'Reminder function if the key is left in the ignition switch.

'Low standby current: <0.5 mA

Electronic Parts

Award: Silver Award (lack of Gold winner)

Category: Electronic Parts

Winning Item: Electric Power Assist Steering (EPAS) System

Company: Rotatech International Corp.

Rotatech's EPAS makes it easier to steer the steering wheel. On all terrain vehicles (ATVs), the system enables riders/drivers to turn and steer with a very little effort. The EPAS uses an electric motor to provide the assist power to the steering column.

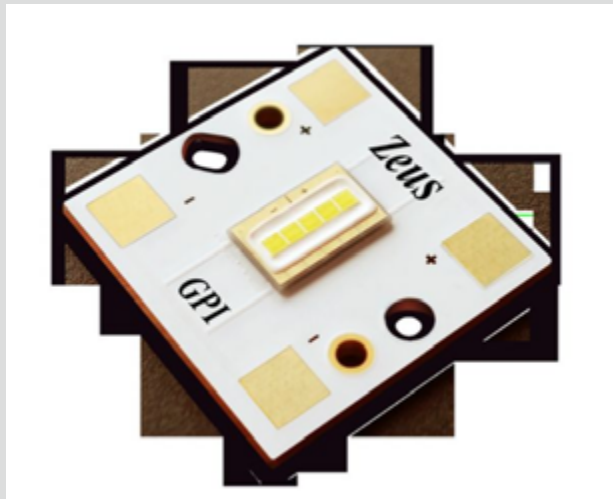

Through a combination of sensor, gearing mechanism and the ECU (Electronic Control Unit), the EPAS provides real-time turning and steering assistance to the driver. The unit can be used for various of off-road vehicles, agricultural machines, and boats. It has an extensive internal fault-monitoring system to enhance system safety. It also has OBD II (CAN and KWP2000) communication protocol built-in to facilitate after-sales service and maintenance. The EPAS can help to improve fuel economy, maneuverability and handling responsiveness, as well as compensate automatically for small suspension and tire changes that are a normal part of service wear.

Award: Silver Award

Category: Electronic Parts

Winning Item: **ZEUS Headlamp LED with GPI Ace Technology Flip Chip**

Company: Genesis Photonics Inc.

The "ZEUS Headlamp LED with GPI Ace Technology Flip Chip" is equipped with the flip-chip LED developed by Genesis Photonics Inc. The headlamp LED has the following advantages:

1. Wire free: The GPI flip chip is eutectic bonded directly onto the ceramic substrate without gold wire, preventing the problem of wire breaks and making the ZEUS Headlamp LED highly durable to vehicle vibrations.

2. Higher heat conductivity, lower thermal resistance: The GPI flip chip has larger bonding area for improved heat dissipation. The structure of the ceramic and the metal core printed circuit board (MCPCB) separates the electrical and heat paths so the heat can be transferred to the copper layer directly.

3. High-current operating, outstanding lumen output and reliability: The ZEUS Headlamp LED can operate at 1200mA and produce a lumen output of about 1500lm. Under reliability test condition: 1200mA driving current and a board temperature 120°C, the lumen maintenance is above 98%.

4. Tight chip array: With the direct eutectic bonding technology, the chip array pitch is just 50um, facilitating optical design for reflector or projector type headlamps.

Award: Bronze Award

Category: Electronic Parts

Winning Item: **EzFC® Dual-Injector Standalone EMS (Engine Management Systems)** Dedicated for Racing

Company: IC Leader Technology Corporation

The EzFC Dual-Injector Standalone Engine Management Systems (EMS) was designed and developed in Taiwan specifically for electronic fuel-injection (EFI) engines. It is a top-of-class EMS dedicated for racing and supports numerous optional peripherals for professional motorcycle and scooter riders and racers. The EzFC features dual-injector outputs to meet MOTO3 race regulations; turbocharged/supercharged modifications up to 500kPa; programmable NOS outputs; an expandable barometric sensor; digital output; programmable fuel compensation (from acceleration, manifold pressure, coolant temperature, inlet air temperature, altitude, cranking, battery voltage and closed-loop modes); programmable ignition compensations (from acceleration, coolant temperature, inlet air temperature, battery voltage and closed-loop modes); an expandable BOSCH 5-wire wideband oxygen sensor for closed-loop fuel compensation with directed A/F for convenient and precision control of engine output power; directed A/F auto-tuning and feedback updating for fuel maps, real-time on-line/off-line A/F logging; and built-in diagnosis code and history record read back.

The EzFC won the 2014 Taiwan Motorcycle Road Race Championship (TMRRC) MOTO3 race held by Chinese Taipei Motorcycle Sports Association (CTMSA).

Award: Bronze Award
Category: Electronic Parts
Winning Item: SparkKing Programmable Digital CDI
Company: Eltronix Co., Ltd.

The SparkKing CDI (Capacitor Discharge Ignition) is a high-performance, programmable motorcycle engine ignition system. SparkKing allows you to quickly set the spark advance angle based on the specific revolutions per minute (RPM). By repeated modifying and tuning the spark advance angle, SparkKing can adapted to any small motorcycle and scooter engine's ignition system.

SparkKing uses a high-performance, highly integrated micro-controller unit (MCU) which provides fast and stable operation and strong signal processing capability. The SparkLink toolkits cable enables the use of USB connections and plug-and-play drivers, so an amateur user can easily check and diagnose the spark advance angle table in the SparkKing CDI. This allows engine engineers to focus on tuning and diagnosing their ignition systems.

New Factory, Expanding Product Lines

Hwang Yu inaugurated a factory in early 2014, covering floor area of 2,700 sq.m. and with 12 production lines. The modern and integrated facility has upgraded the company's monthly production capacity to 900,000 pieces from 400,000, to drive the maker's plan to gradually expand product lines. By moving some of its established production lines to the new factory to add inventory space, Hwang Yu claims that the lead time of 80% to 90% of its existing items can be shortened to only 21 days, compared to the current 45 days.

To better meet global customers' requirement for one-stop-shopping, Hwang Yu has been aggressively developing new products. In conjunction with the continued expansion of its service team, the firm targets to offer the best-quality products and services, including sourcing. The firm is also scheduled to pass the Customs-Trade Partnership Against Terrorism (CTPA) certification in 2015, which is expected to further accelerate delivery to customers in North America.

Hwang Yu's management says it continues to restructure the firm to upgrade product quality, improve efficiency, and enhance service quality, aiming to offer "safe and reliable products as well as happiness to global customers and end users."

GLOSO TECH. INC., Circuit Breaker, Circuit Protectio, Waterproof, Overload Protect, Motor Protect, Ignition Protect,

YOUR CHOICE OF CIRCUIT PROTECTION

GLOSO Tech. Inc, founded in 1985, is a TS16949 and ISO9001 certified manufacturer of quality switches and circuit protection products, and a true leader in the low-voltage and overload voltage application market. We design, manufacture and assemble in-house backed by the best R&D, Production and Engineering teams in the industry. Our products meet the safety standards of UL, ISO, SAE, TUV, RoHS, and ENEC. With three sales offices in Taiwan, two sales centers and two factories in China, we also offer OEM, ODM and private label service.

The company's hydraulic (A, J and S-Type) and thermal circuit breakers (E, L, W) are designed for electric home appliances, power tools, telecommunication systems, healthcare equipment, industrial testing equipment, marine, automotive, security systems and protection system. The "Ultra Hi-Amp" Family is its latest and most advanced circuit protection line.

Hung Chung Co., Ltd.

Power-steering hoses, brake hoses, pipes, customized parts

Founded in 1975, Hung Chung Co., Ltd. is a seasoned maker of power-steering hoses, brake hoses, and staple auto parts with several decades of experience in manufacturing and export.

Initially a trader of performance-enhancing parts and accessories for agricultural vehicles and cars, the company then ventured into production of hoses for steering and brake systems, having evolved into a high profile supplier amid buyers globally.

The company offers power-steering and brake hoses, mostly for Toyota, Mitsubishi, Nissan, Honda, Ford, Volkswagen and Lexus, as well as valve guides, fuel pipes, brake pipes, hydraulic piping systems, pipe fittings for hydraulic systems, clutch pipelines, automotive air conditioning hoses and pipes, engine oil lines, and so forth. Furthermore, the company draws on its know-how and experience to fill custom orders.

Committed to quality and customer satisfaction, the company adheres to by-the-book QC and efficient warehouse management in-house, to offer high quality and rapid delivery to help customers enhance competitiveness. With time-tested reputation backed by well honed production, the company is known amid professional buyers as a reliable partner.

For more information, please contact the company in English or Chinese.

Intelligent Logistic System

Our computerized e-LOGISTIC SYSTEM bringing the inventories in 56,000 M² (600,000 ft²) warehouse, under barcode control. All parts can be tracked from the point at receive & inspection, preparation, and until loading work completed. All control points are designed to reduce human error. Our computerized system also tracks the order status to monitor and control the efficiency of logistic operation.

This advanced logistic warehouse is equipped with 40 loading docks and 20 truck docks, integrated with modern equipments & systems which designed to make our work efficiency and accuracy. The goal is to provide our customers with superior "ONE STOP SHOPPING & TOTAL SOLUTIONS" service.

GOOD DESIGN PRODUCT

TAIWAN
SYMBOL OF EXCELLENCE
2003 WINNER

Shanghai SIMYI Auto Parts Industry Co., Ltd.

Auto body parts

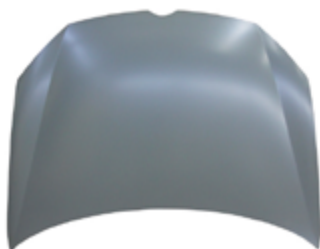

Shanghai SIMYI Auto Parts Industry Co., Ltd. was established in China in 1996 and specializes in auto body parts manufacturing and mold development.

Continuous rapid expansion has built the company into a leading player of its kind in China. It established a subsidiary, Simhoong Auto Parts Industry (Anhui) Co., Ltd. to serve as its production base and logistics center.

SIMYI was founded with total investment of US\$57.5 million; today, its registered capitalization stands at US\$37.5 million and its employment totals more than 1,100. Company headquarters includes a campus with total area of 385,000 square meters.

Ever since its inception SIMYI has brought in top-end equipment from industrially advanced countries to upgrade its manufacturing techniques and capabilities, and its corporate management system has come to be reputed for high efficiency. In addition, SIMYI has earned major international quality-system certifications including ISO9001, QS9000, ISO/TS16949, and ISO 14001. Most of the firm's products are certified by CAPA (Certified Automotive Parts Association) of the United States.

SIMYI supplies a wide range of auto body parts including hoods, fenders, doors, tail gates, bumpers, and radiator supports, among many others. The high-quality, reasonably-priced parts are highly competitive in the international aftermarket.

With "Reducing Cost, Improving Quality, and Enhancing Market Competitiveness" as their business doctrine and "High Quality, Zero Defects, and Customer Service Forever" as their constant policy, SIMYI employees are committed to providing the best of products and services to customers throughout the world. The company looks forward to cooperating with global customers in the joint creation of more lucrative business opportunities.

SIMYI has been a frequent winner of awards granted by the Anhui Provincial Government for honoring the company's outstanding performances in technical advancement, operation efficiency, high-grade credit etc., including the "AAA-grade Credit Enterprise" and "Advanced Technology Enterprise," among others. In addition, the company's SIMYI-branded auto body parts have been rated as "Anhui Province Famous Brand Products" from 2009 through 2012.

2015 Show info

POLYWAY INDUSTRY CO., LTD.

AUTO MIRRORS & ACCESSORIES

Polyway Industry Co., Ltd. was founded in 1981 and is one of the largest after-market automotive manufacturers in Taiwan. Polyway specializes in automotive mirrors and mirror related products. We have developed a complete range of over 3,000 OE replacement mirrors for the aftermarket. Polyway currently offers the most complete line of mirror applications for the North American, European and other markets. All products are tested with the highest standard and most of the mirrors have E-Mark approval and meet FMVSS specification.

TRI TIGERS CO., LTD.

Car wraps vinyl film

Founded in 1989, Tri Tigers Co., Ltd. specialized in developing and manufacturing high quality self-adhesive vinyl (SAV) signage products, claiming to consistently develop newer and better products and concepts that are proven high-sellers with established client base.

The maker provides one-stop-shopping convenience, offering a diverse range of products across 7 product lines, including car wraps vinyl film, self-adhesive decorative window film, solvent printing media, cold laminating film, mounting film, color vinyl for cutting plotter, and application tapes. All these products are produced at Tri Tigers' ISO 9001:2008-certified production facilities.

Tri Tigers continues to grow up due to the long-term cooperation with valued clients, currently providing

OEM/ODM services to buyers from Canada, the U.S., Italy, Australia, Dubai, Japan, Singapore, Malaysia, and Indonesia etc., customized products for more than 50 brands worldwide selling.

Tri Tigers' car protection film come in standard size (WXL) 1530mmx25M/per roll, are thermo-formable to suit most flat and curved surfaces. With the super clear vinyl film to wrap the car to protect the car's paint from harsh conditions, stones, sand, road debris and bugs. A minor installation fee can protect big investment in cars, especially vulnerable leading hood edges, fender end caps and rocker panels. The films are transparent and do not alter the original appearance of the cars. The best is, when replacing the new film, there are no residues left while taking off the old films.

Spline reversible
ratchet wrench / RPGU

PATENT

Magnet Stop Ring
reversible ratchet
wrench / RPG-M

NEW

Extra long double flexible
& reversible ratchet wrench
/ FRPGDLU

NEW

Flexible with
lock ratchet
wrench
/ FPG-KK

NEW

Reversible
ratchet
wrench
/ RPG

RPG-M

Strong magnetic
ratchet top.

Accessories

The pivoting section is unpainted,
enabling easy operation.

Uniquely-designed handle with
double-color grip is soft,
ergonomic, anti-slip, thus
superior to counterparts.
Rubber handgrip resists
corrosion or breakdown when
oil-stained.

HIGH TENSILE STRENGTH BOLT CUTTER

- Made of chrome vanadium steel or chrome molybdenum steel, drop-forged.
- Serrated cutting edges are heat-treated to easily and firmly grip bolts, saving labor.
- The pivoting section is not painted, enabling users to easily handle this unit without adjustment before and after use.
- Uses medium carbon steel bolts that have 8.8-grade strength.
- Thick, ergonomic handgrip features an extended life.
- Meets or exceeds DIN, ANSI specifications.
