Taiwan Fastener Maker Chun Yu Keeps in Fine Shape amid Market Changes

By STEVE CHUANG

On the payoff of its efforts to continue going upmarket, Chun Yu Works & Co., Ltd., one of Taiwan's major fastener makers and listed on the Taiwan Stock Exchange, effectively keeps in comparatively fine shape among its local peers amid market changes seen lately.

After upbeat performance seen in 2014 through the first half of 2015, Taiwan's fastener industry has been confronted with growing impacts since the second half of last year, which include the fluctuating global economy, China's economic slowdown, sluggish market demand in Europe and many others. Among the worst factor, industry insiders say, is slumping steel price, which drastically dropped by 30 percent in China last year to cause many of Taiwanese fastener makers to suffer severe losses on inventory write-down in the same year.

To industry insiders, adding salt to the injury is EU's recent cancellation of its antidumping measures on fasteners from China. This February the EU decided to repeal its anti-dumping duties imposed on steel and iron fasteners imported from China to respond to the WTO rules announced earlier that require the EU to bring its measures into compliance or face retaliatory measures from China. This has cast further shadow over outlooks of Taiwan's fastener industry in the years to come.

While the woes mentioned above has spread gloom to Taiwan's fastener industry, Chun Yu, however, has remained buoyant among its gloomy local counterparts as reflected in its financial reports for 2015: after-tax net profits sharply surged by 16 percent year on year and annual revenue slightly declined by only 8 percent.

President M.H. Lee of Chun Yu attributes the firm's robust 2015 performance to its effort on continuously developing the higher-end segment of the global fastener market and better diversified product lineup. For instance, Lee indicates that the firm, whose product portfolio encompasses over 36,000 different kinds of fasteners, has been actively developing wind turbine fasteners after successfully gaining solid ground in the segment for rail fasteners. Such a strategy works to help Chun Yu effectively hold off rivals, especially those resorting to underselling.

On EU's repealing of antidumping penalties on China's steel and iron fasteners, which has helped Chinese competitors to stage a comeback in the European market, Lee comments that it will pose little impact to Chun Yu, primarily because its products are targeted at higher-end segments to differ from those imported from China. Presently, over 35 percent of the firm's revenue is generated annually in the European market.

Bolstered by successful product diversification and positioning, Chun Yu is expected by institutional investors to score an operating profit margin of over 20 percent for the first half of this year, and end the whole year with enviable performance. CENS

Successful product diversification and marketing strategies help buoy Chun Yu amid market changes (photo courtesy of UDN.com).

Lien Ya Machinery Co., Ltd.

Fasteners, special fasteners, screws, nuts and forging, lathing, grinding services

Founded in 1987, Lien Ya Machinery Co., Ltd. is an ISO 9001- and ISO/TS 16949-certified company specializing in producing all kinds of fasteners, especially special items, by utilizing its comprehensive, integrated in-house production and processing capabilities.

Currently, the firm's fastener products are mainly for transportation vehicle, bathroom hardware, sporting goods etc. applications; but Lien Ya, in fact, can produce any kind of fasteners for special applications according to customers' specifications.

Thanks to its unmatched know-how and expertise in dedicated-machinery development and production automation, as well as manufacturing and processing techniques, Lien Ya has steadily enjoyed revenue growth throughout the past 30-plus years. Sticking to delivering high quality and service, Lien Ya is moving forward from built-to-order production to all-around manufacturing service including R&D, the company says.

Lien Ya is a key contract supplier of high-end, special-specification fasteners to almost all the major fastener suppliers in Taiwan, which now accounts for about half of the firm's revenue, with the remaining revenue coming from orders placed by global customers. With a solid foothold in the fastener industry already built, the ambitious company is ready to go to the next stage of growth by investing more in global marketing and sales.

Lien Ya, in fact, started as a machinery maker of all kinds of dedicated machinery, whereby the expertise and know-how accumulated enabled the company to design and sharpen various types of manufacturing techniques and production automation. To date, about half of the company's mechanical equipment are self-developed to achieve the highest production efficiency and optimal functionality.

The fastener maker stresses that in-house development (and in some cases in-house production) of manufacturing equipment is one of its competitive cores, because such approach

enables the company to truly know its needs and operation of the machines to achieve the best quality, highest precision level and optimal cost control.

Currently, Lien Ya focuses mainly on production of two types of fasteners, items requiring the highest precision and sophisticated processing, as well as big-volume items, which, says S.T. Shen, company chairman, are the top and the bottom of a pyramid.

We, Chuen Jaang Precision Industry Co., Ltd., established in March 1982, specializes in development and production of all kinds of precision metal, stainless, aluminum, copper, and plastic parts. Our machining capability feature diameters down to 0.03mm, tolerances less than 0.001mm, surface finish as fine as 0.1um, and length ranging from 2mm to 500mm. Our products can be widely applied to almost all the industries. At present, 40% of the company's output is sold to the industry of electronic parts and accessories, 30% to the molds and dies, 20% to the automobile and machinery, and the remaining 10% to others, such as watch, toy, furniture, firearm, and textile. Our future expectation is to be O.D.M and O.E.M supplier for our customer. That is the reason why we have series of equipment in house.

YEUN CHANG HARDWARE TOOL CO., LTD.

Steel Concrete Nail, Screws, Rivet, Nail, Fastener

Established in 1987 as an efficient and sincere team of professionals who have been dedicated to producing quality products either locally or worldwide, we supply various nails and fasteners and have built a solid reputation as an authorized OEM supplier with several major global buyers. Our in-house brand, Thumb Brand, is renowned worldwide and has become a trademark of quality assurance, with over 50% of our sales coming from the Middle East. Also, to enhance production capacity, we set up a factory in Chang-Bin Industrial Park in Central Taiwan in 2000. Fully equipped to carry out manufacture, heat-treatment, finishing and packaging in-house, we adopt the latest testing instruments and employ seasoned technicians to meet quality r ...

Spring Manufacturer, Wave Spring, Retaining Rings, Power Spring, Constant Force Spring, Micro Precision Parts

Helping Your Business SPRING into Action

Also expertise in spring-related problems

Wave Spring & Coil Spring

Retaining Ring & Ordinary Snap Ring

Wave Springs
Tapping wave springs' inherent high load capacity when used in tight spaces, we can develop such springs occupying less than half the volume than would coil springs used similarly.

Spiral Retaining Rings
Earless (w/o assembly interference) and deburred inner and outer diameter, our retaining rings are easily installed and removed. Our stamping die retaining rings have ears w/assembly interference.

Power Springs,Clock Spring
Made of roll-up steel straps, w/a fixed spring center in the middle of the shaft, and w/a housing to limit its outer diameter, our power/clock springs are divided into two categories: Typical & pre-stressed models. Our pre-stressed power springs have at least 25% higher torque than conventional springs-even though the designs of the two models are the same. Power springs (clock springs) are widely used in various auto-retracting mechanisms.

Constant Force Springs
Featuring compactness and smooth, even but great load-carrying capacity in the effective travel according to spring length, our constant force springs are widely applied on LCDs, retractors, staple guns, fans, curtains, etc.
