Guidebook to Taiwan Industrial Suppliers (TIS)

2016-01 Edition

TIS is Taiwan's most complete listing of manufacturers of industrial parts, components, and accessories, containing around 12,000 suppliers and manufacturers in various product categories. Tap Taiwan's recognized tradition and capacity in wide-ranging industrial parts production by reading TIS. Taiwan Industrial Suppliers (Annual).

Index of Selected Suppliers

- Raw Materials, Plastic Billets, Rubber, Silicone, Steel, Stainless Steel, Copper, Aluminum, Magnesium, Zinc
- Warehouse & Logistics Systems
- Power Supplies, Electronics, Computer Components, Software
- Testing And Measuring Instruments (Gauges And Measuring Instruments, Optical Inspection Equipment)
- Transmission System (Ballscrews, Slideways, Bearings, Motors, Gear Reducers, Clutches)
- Hydrodynamic System (Hydraulic Units, Air Compressors, Filters)
- Tools, Cutters, Jigs, Spindles, Grinding Wheels, Molds And Dies, Robots
- Surface Treatment (Cladding, Painting, Electroplating, Anodizing)
- Rubber Parts And Components (Molded Rubber Parts, Molded Silicone Parts)
- Plastic Parts And Components (Extruded Parts, Injection Molded Parts, Blow Molded Parts)
- Casting, Forging, Die-casting, Heat Treating
- Metal Formed Parts (Screws, Springs, Wire Formed Parts, Sheet Metal)
- CNC Turned, Milled, Drilled, Ground Parts
- Metal Stamped Parts
- Special Page

Automating production with robots is regarded by Taiwan's major manufacturing companies as a savvy strategy against rising local labor cost (photo courtesy of UDN.com).

Robots Are Finding Their Way into Taiwan's Manufacturing Industries

By STEVE CHUANG

With robotic technologies continuously advancing, Taiwan's major companies in local manufacturing industries have actively moved introduce robots to production lines as a means to cope with chronic manpower shortages and continuously rising labor costs.

Among these companies, Hota Industrial Mfg. Co., Ltd., one of the largest precision auto transmission component makers by size, confirmed in late 2016 that it will bring in over 1,000 units of various robots to fill job vacancies in production lines, including transportation and packaging tasks, in its factories within four years, so as to minimize the impact of the enforcement of the so-called "one fixed day off and one flexible rest day" policy by the Taiwanese government since December 23, 2016, an amendment to the Taiwan Labor Standards Act, which is widely believed to result in wage hikes.

David Shen, chairman and CEO of Hota, stated that to conform to the new labor policy, his company will likely see an estimated increase of 9.4 percent in annual labor cost, or an equivalent of some NT\$43 million (approximately US\$1.38 million), based on its overall monthly payroll for the moment, hence being forced to resort to robots and automation.

The four-year investment, which involves the procurement and installation of robots and necessary software, is estimated to cost Hota roughly NT\$1 billion (US\$32.175 million).

Based on Hota's current manpower resources of some 900 employees, Shen stressed that the company will hopefully attain its annual turnover goal of over NT\$10 billion (US\$321.75 million) in 2019 after all the robots to be procured become online.

In fact, Hotahas for some time worked on production automation through constant investments, including a brand new factory located in the Dapumei Intelligent Industrial Park in Chiayi County, southern Taiwan, which is scheduled to start up this March and will employ a full line of intelligent manufacturing equipment to not just boost the company's overall output by 30 percent, but ensure a nearly 100-percent yield rate.

Coincidentally, Taiwan Hon Chuan Group, the biggest maker of bottle caps, PET bottles and preforms on the island, has also planned to increase the use of robots in production in the coming years, to respond to the implementation of the "one fixed day off and one flexible rest day" policy.

Presently, the company employs about 1,500 workers in Taiwan, with around 60 percent of its manufacturing tasks beingful-filled with automation technologies, including robotic arms.

Meanwhile, Hiwin Technologies Corp., a globally known supplier of precision linear motion components and robotic arms, has claimed to step up automating its production and provide more extensive training programs to employees, in an effort to buffer the impact of worker wage hikes in the wake of the enforcement of the said new policy, and enhance overall production efficiency. Yang Light Engineering Co.

Automotive ratchets, tie-downs, woven straps, fasteners, buckles, pulley fittings, OEM parts

Yang Light Engineering Co., established in 2005 in Changhua County, central Taiwan, is a specialized manufacturer of metallic products and parts for wide ranging applications, with two manufacturing bases totally taking up 13,000 square meters.

The versatile maker turns out a broad spectrum of hardware products and industrial parts, including automotive ratchets, tie-downs, woven straps, fasteners, zinc buckles, shackles, pulley fittings, hardware parts and components, medical equipment, telecommunications parts, motorcycle parts, auto hardware, punched, lathed and pressed products, hand tools, strap-holders for planters, overcenter buckles, truck anchor points, cam buckles, anchor points, tool bags, tail nets, ratchet tie-downs, etc., all of which are compliant with international standards as CE and UL.

The company's products are well-received by customers across as many sectors as the number of its product offering, with satisfied buyers of military vehicles, watercrafts, automotive products, agricultural equipment, leisure and sports equipment, furniture, construction and climbing equipment. Over 80 percent of the firm's output goes to Europe, North America and Japan. Some globally famous enterprises in the automotive and electronic sectors also outsource production of parts from the company either directly or indirectly, indicative of this maker's proven reputation as a world-caliber OEM (original equipment manufacturer).

To secure sustainable development and avoid the vicious cycle of underselling competition against rivals from emerging countries, the company has developed R&D technology that is not easily duplicated and production skills to shore up its ODM (original design manufacturing) business, so as to move upmarket with potentially higher margins.

The company is also notable for its extensive know-how about materials. Understanding that the quality of output is often determined to large degree by proper adjustment in production processes according to material used, the company researches and studies characteristics of various materials, hence having accumulated ample knowledge about different production techniques that suit copper, zinc alloy, tin, aluminum, stainless steel of grades ranging from 300, 400 and 500 series to 600 and 700 high-end series, special high-hardness metals, engineering plastic and high-density yarn.

Excellent production efficiency and flexibility are also the

firm's core competency, achieved partly by a full slate of advanced production equipment employed in-house, including CNC machining centers, punching, forging, and die-casting machinery and large-sized electric overhead cranes, and in no small degree by many subcontractors who possess specialized technique and know-how in different fields.

Unremitting effort paid to develop strong mold developing capability helps build Yang Light's current success as well, which is key to cutting cost and raising quality and quantity of output, not to mention shortening lead-time by advancing schedule of volume production. To that end, this manufacturer dedicates most of its R&D resources to develop computer-aided 3D mold designing and rapid prototyping technologies, also updating its knowledge about mold development and mechanical engineering through periodical meetings with foreign experts. The efforts have paid off, as the company is able to develop over 200 sets of new molds per month independently and continues adding new products to its lineup.

With strong commitment to quality, Yang Light adheres to by-the-book quality control measures, such as digital quality archiving and hourly spot-checks, in compliance with the ISO and TS16949 systems. Also, the company has set up a full line of precision testing devices, including 3D projectors and hardness, impact and tension testing machines, some of which, like the newest horizontal 200t tension tester, are developed in-house for special tests and more thorough pre-delivery inspection. Noteworthy is that each independently developed testing device has been approved by SGS, thanks to the company's R&D capability.

Yang Light supplies varieties of hardware products and industrial parts, some on OEM and ODM basis

Yosin Ind. Co., Ltd.

CNC milling, CNC lathing, precision parts & components, electronic parts, auto and motorcycle parts, mechanical parts, specialty metallic valves, etc.

Founded in 1979, Yosin Ind. Co., Ltd. is a veteran company specializing in OEM/ODM manufacturing with integrated capability from parts production, processing, surface treatment, assembly to packaging. The firm is known for always sticking to the highest quality-control (QC) standards and delivering total customer satisfaction.

The versatile maker is noted for being dedicated to developing and upgrading advanced design skills backed by cutting-edge 3D computerized graphics, helping global customers with product and mold/die design, development and manufacturing.

With in-house manufacturing of computer numeric control (CNC) milling and CNC lathing, Yosin offers precision parts and components for wide-ranging applications, such as building hardware, bathroom hardware, auto and motorcycle parts, electronic parts, furniture hardware, industrial hardware, hand tool accessories, parts for gardening shears, mechanical parts, specialty metallic valves, and many others.

It specializes in processing various types of metallic materials, including aluminum alloy, steel alloy, copper alloy, titanium alloy, stainless steel, SCM440-grade engineering

plastic, SCM430-grade chrome-molybdenum steel, etc.

For continued business growth, Yosin carried out a corporate restructuring in 2007 to upgrade operations to world standards with installation of advanced equipment, improved customer services, expanded versatility, and new management concepts. The company then introduced high-end machinery from industrially advanced nations, such as Japan, Germany, etc., to effectively become a top-notch player of its kind in Taiwan.

Yosin says that it welcomes global customers to place OEM/ODM orders, and is very confident in providing integrated or individual services from product design and development, to assembly and delivery.

Precision CNC Machining for Industries

Main services:
CNC milling and lathing of precision parts and components, gauge/meter parts, electronic parts, automotive and motorcycle parts, mechanical parts, and specialty metallic valves.

OEM/ODM orders welcome!

Processed materials:
Aluminum alloy, alloy steel, copper alloy, titanium alloy, stainless, SCM440-grade plastic steel, and SCM430-grade chrome-molybdenum steel.

Main products:
Industrial parts & components, various types of accessories, and finished products.

CYCAS MACHINERY & TOOL CO., LTD.

Stainless Steel Submersible Pumps, Submersible Pumps, Oil Cooling Submersible Motor, Water Cooling Submersible Motor

Cycas Machinery & Tool Co., Ltd. has over 15 years of experience in making stainless-steel electric submersible pumps, mainly 4", 6" and 8" models, as well as submersible motors and pump accessories, offering products and designs meeting IEC34-1, CE, NEMA and ISO 9001-2008 certifications under the OSONG brand that are hot-sellers globally. Our qualitatively-consistent production turns out submersible pumps that are globally competitive and highly regarded, while we aim to always provide the best products and services among peers.

KEVIN GEARS ENTERPRISE CORP.

Gears, Machine Parts, Helical Bevel Gears, Straight Bevel Gears, Bevel Gears, Tilt Bevel Gears, Transmission Gears

A skillful processing service provider with experience for more than three decades, we established "Lolewis Gears Enterprise Corp." in 2001 and successfully exported our products to markets worldwide. In 2006, we expanded our factory area to the current address and renamed as "Kevin Gears Enterprise Corp." Continuing purchasing high-end machinery to offer high-precision gears is our key to successfully penetrating products into markets in Japan and the USA. OEM/ODM orders welcome. Main products: Bevel gears, spur gears, worm gears, helical gears, industrial-duty gears, gear racks, gears for speed reducers, gears for gearboxes, transmission gears, worm shafts, gears for motors, etc. Modules: 0.3~M8

Special Steel Materials and Various Hardware Accessories for CNC, Lathes, Parts for Bathroom Equipment, Water Heaters

Founded in 1992, Shyang Meng Industry Workshop is experienced in developing precision parts, and always strives to meet customers' every need with its cutting-edge expertise. We have grown steadily by insisting on high-efficiency production and providing superior-quality products. Starting in 1995, we've used compound CNC lathes instead of traditional lathes to turn out high-quality parts to meet customers' most critical demands. Our precision inspection equipment and testing equipment also help to maintain the high quality standards of our products. We have 20 CNC lathes, including compound CNC sliding-headstock lathes, compound CNC Swiss-model lathes, standard CNC sliding-headstock lathes, standard CNC Swiss-model lathes, and conventional lathes, as well as precision inspection and testing equipment

We, Chuen Jaang Precision Industry Co., Ltd., established in March 1982, specializes in development and production of all kinds of precision metal, stainless, aluminum, copper, and plastic parts. Our machining capability feature diameters down to 0.03mm, tolerances less than 0.001mm, surface finish as fine as 0.1um, and length ranging from 2mm to 500mm. Our products can be widely applied to almost all the industries. At present, 40% of the company's output is sold to the industry of electronic parts and accessories, 30% to the molds and dies, 20% to the automobile and machinery, and the remaining 10% to others, such as watch, toy, furniture, firearm, and textile. Our future expectation is to be O.D.M and O.E.M supplier for our customer. That is the reason why we have series of equipment in house.
